Egyptian Table Olive Packaging & Quotation Guide

Revised 2026-10-13

What Drives the Price per KG

Table-olive prices move with the season, so we don't publish a fixed price list — any number printed today could be wrong by the time you read it. Here is what actually drives the price, and how to get a current, honest quote.

- **Harvest yield & weather.** Egypt's main olive harvest runs through the autumn. A strong yield increases supply and softens prices into the new season; drought or an off-cycle year (olive trees follow a natural biennial bearing pattern) tightens availability.
- **Currency movements.** Quotes and payment can be in USD or EUR. Movements in the Egyptian pound's exchange rate can affect prices between quotations. Currency volatility introduces short-term swings worth watching if you're timing an order.
- **Variety & caliber.** Price varies by product, caliber, packaging and order volume, and is confirmed in the quotation.
- **Packaging & freight.** Glass costs more per unit than bulk barrel; ocean freight rates and container availability also feed into your landed cost even when the FOB price hasn't moved.

An illustrative example (not a quote): consider a buyer sourcing Green Olives, caliber 141/160, in bulk barrel packaging, for a full 20ft container FOB Alexandria. Their landed cost per kg would reflect the current FOB price for that caliber and packaging, ocean freight to their port, import duty in their market, and any local repacking cost. Illustrative only — not a quote or a binding offer. Actual FOB pricing depends on the current season and is confirmed on request.

Requesting a current quote: tell us the variety and caliber you need, your preferred packaging format, your target order volume, your destination port, and which Incoterm you prefer (FOB, CIF, or CFR). We'll confirm a current, honest price against exactly those terms rather than a generic range.

Packaging Formats We Offer

- **Glass Jars.** Premium retail and deli presentation. Available in 320ml, 370ml, 467ml, 720ml and 1050ml — 12 jars per carton up to 720ml, 6 per carton at 1050ml. Showcases the product; supports branded and private-label labeling.

- **Tin Cans.** Shelf-stable and durable, ideal for food service, warm-climate export, and oxidized black olive lines. Available as 65mm, A9, A10 and A12 cans — 12 per carton for 65mm, 6 for A9 and A10, 4 for A12. Stack and ship efficiently.
- **Plastic Buckets.** Food-grade buckets in 2, 5, 10 and 20 kg sizes, for restaurants, caterers, and repackers. Balance cost, volume, and convenience.
- **Plastic Barrels.** Bulk brine maturation and shipping in 220 kg barrels, for the lowest cost per kilogram on large volumes.

These are the packaging formats confirmed as available. Exact sizes, case configurations, and minimum order quantities per format are confirmed during quotation and depend on the specific product and order volume.

Understanding Caliber Sizing

Table olives are graded by caliber — the count of olives per kilogram, written as a range such as 181/200. A lower number means larger individual olives. We supply calibers from 140 to 360; the caliber for your order is confirmed in the quotation. Exact caliber ranges available for each variety are listed on the product catalog and each product's own page.

Private Label & OEM Packaging

Your brand, your packaging design, our export-ready product. We support private-label packaging across glass, tin, bucket, and barrel formats, handling printing, filling, and export documentation. We can help with label design on request. Minimum order quantity, artwork specifications, and labeling requirements for private-label and custom packaging are confirmed per project during quotation, since they depend on the format, print method, and volume you need.

Exact packaging options, brine specifications, and pricing are confirmed during quotation for the selected product and order volume. Request a Quote
